Project

Travelious

GitHub

Features:

As part of a collaborative project for a travel organization website, my contribution involved setting up a server on render.com and developing key features related to travel, tracking, scuba diving, and paragliding. This included creating a seamless user experience through login and sign-up pages, implementing secure authentication,

Shop.com

GitHub

In our collaborative e-commerce project, involving a team of four members, I was responsible for developing the product page. My key contribution included implementing sorting, filtering, and search functionalities. I ensured that users could apply both sorting and filtering options simultaneously, enhancing their ability to refine their search results efficiently.
